This is a handy composite easy-to-use reference book of the four major building codes covering building, electrical, plumbing and HVAC. It is for residential buildings. Previously, the Code Check series was (and still is) issued for each of the individual codes noted above. This guide combines all four into a condensed and smaller spiral bound hard cover book. It is easier to carry and use if you need to take a quick peek at more than one of the various building code references. It is an easy guide for contractors, home inspectors, and others interested in the current rules and regulations as they pertain on a national basis. It is not meant as a substitute for your local code regs however. I believe both formats have a use and am glad they came out with this newer composite or complete version of all residential codes into one small book. An individual contractor or tradesperson might appreciate the individual CODE CHECK flip chart style guide better. As they cover one of the 4

various building codes, they are slightly larger and much more durable than the composite book. They are published on damage-resistant plastic coated card stock and impervious to moisture damage. They are also larger, yet thinner and are quicker to use as they flip open with their sections all summarized on the cover. The composite book is smaller, yet thicker. While it is also spiral bound, the paper it is printed on is not tear or moisture-resistant. The value for the composite is superior in that it provides most, if not all of the same information as the individual Code Checks. It is also much less expensive buying the composite compared to buying the four code checks separately.
