Rubik's Cube Secret Rubik's Cube Solution Guide, Beginner's Method Of Solving The Rubik's Cube

Synopsis

Before learning how to solve the Rubik's cube, it is good to know a little history of it. Rubik's cube is simply a puzzle in a shape of a cube invented by Hungarian professor of architecture, Ernő Rubik. Its name carries the general idea of the toy "a puzzle cube created by Rubik". Rubik's cube. Erno Rubik named his creation "Magic Cube". It was in 1974 where he originally designed the magic cube for architectural puzzle. He wanted to see if it was possible to solve the magic cube comprised of miniature cubes. As he worked on his project, he saw that the completed cube could also be used for mental exercise. Magic Cubes went on sale in Hungary. As the toy spread and reached United States, the name "Magic Cube" was changed to "Rubik's Cube". The cube consists of 26 cubelets or miniature puzzle cubes. Though the cube is 3x3x3, that would be 27, the central core is immovable that is why it is not counted. A Rubik's cube has six surfaces. Each surface has a color. The classic colors of it are red, blue, yellow, orange, green, and white. The standard size of the cube is 5.7cm³.

Customer Reviews

Ok, first thing I want to point out is that explaining how to do a rubik's cube in writing is very difficult. It took me about an hour to finally solve my cube the first time. After that, another 15 minutes of using my notes and checking back with his explanation multiple times, but solve again, I did! I feel that the author did a great job in explaining the algorithms as best as he could, and although I had to re-read some parts many times over to understand it correctly, I feel that he did a great job. Granted, it's not perfect, but as i got it free with Prime, I found it very helpful. Make sure you read the steps CAREFULLY before you assume they are wrong, because they are not.

Unfortunately, this book was just plain confusing! I'm sure that the author's solution works for him or her; it just isn't presented in a way that's easy to follow. I found that YouTube was a much better resource. I then found a free, simple solution guide on the Rubik's website. (Just Google "rubik's cube algorithms.") I printed that, and it's really helpful.

Don't waste your money. It's very confusing and difficult to follow. The Rubik's cube website has a PDF you can download that is easy to understand. Do yourself a favor and try that to solve your puzzle.

I hate to rate a booklet that so much time obviously was put in to it, but I found it totally confusing. Now, if you have NEVER tried to solve a Rubik's or other 3x3x3 cube and have never attempted to get ready by looking at videos and the like then I say go for it. It may work for someone who hasn't solved a cube before. And, after seeing a video that uses something similar to this for solving blindfolded, it might actually be perfect as it may help you remember where cubies go. But for me, it didn't work. After I've solved mine using Fridrich's F2L and OLL/PLL without cheating (looking at books or watching videos again :)) maybe I'll take a look at it again and try to make sense of it all. So - finally - if you HAVEN'T ever tried the cube and just got one, then definitely give this a go. If you've been solving for a while and think this might help more, still give it a try. Hopefully it's just me who's confused with it and others can pick up on it. Good luck and comment, please, if you have success using this method. I'd like to know how you went about using it.
